EDUCATION

University of California, Berkeley

08/2022 – 12/2026

B.A., Computer Science & Cognitive Science

- **Skills:** LLM Agents, RAG Pipelines, Evals, Vector DBs, Python, GoLang, JavaScript, SQL, GCP, Bazel, gRPC, Claude Code
- **Scholarships:** Full Scholarship: Shelby Davis Foundation & UC Berkeley Departmental Award

WORK

UC Berkeley AI Research (BAIR)

Berkeley, CA

Undergraduate Research Assistant

02/2026 – Present

- One of five external reviewers (with Prof. Jonathan Stray) invited to audit [X's open-source recommendation algorithm](#) before its public launch: dug into the pre-release codebase, surfaced missing packages, and proposed the mutuals ranking-change history that fed directly into X's new Under the Hood transparency tool.
- Reverse-engineered two hidden architectural mechanisms suppressing in-network content in X's 2026 [open-sourced ranker](#), using feature ablation in JAX/Haiku, under [Jonathan Stray](#).
- Building [AgentHLE](#) (unpublished): a computer-use benchmark pushing frontier agents on long-horizon, real-world tasks across earnings calls, SEC filings, and live market data. NeurIPS 2026 submission.

Hooglee

San Francisco, CA

Founding Product Intern

11/2024 – 12/2025

First junior hire at ex-Google CEO's video AI startup, embedded with founders from seed through Series A (2xx million USD).

- Owned user research end-to-end: personally ran 200 structured interviews to find exactly where generation quality broke for real users, then presented findings at weekly all-hands to push them straight into the product roadmap and the AI team's post-training work.
- Built and shipped an automated pipeline (NotebookLM, Zapier, Claude, Granola) that turned a flood of raw user-research transcripts and bug tickets into a ranked priority list, killing the team's manual triage process.
- Owned Segmented Video Search start to finish: wrote the PRD, shipped RAG-powered search integrating Gemini 2.5 Pro embeddings with ASR metadata indexing, hit <200ms query latency.
- Won the company hackathon outright with User Profile Pipeline: built an agentic system ingesting multi-source behavioral data (Gmail, Calendar, Photos via OAuth) and generating structured user profiles via LLM function-calling; it became the foundation of the production recommendation system.
- Shipped a GoLang admin dashboard from scratch for trust and safety operations, user management, and growth analytics, used daily by the moderation team.

UC Berkeley College of Engineering

Berkeley, CA

Head Teaching Assistant

01/2024 – 05/2025

- Mentored 500+ students in [Berkeley Method of Entrepreneurship \(ENGIN 183B\)](#); directed analysis of 300+ startups across AI, blockchain, and healthcare.
- Built and ran the first-ever [Global Student Startup Competition](#) in Korea, coaching the winning team to victory.

OTHER

Awards: International STEM Mathematics Olympiad 2021: Top 10 Global Ranking (top 0.1%)

Interests: Travelling (20+ countries); Figure Skating; Artistic Swimming
